PULSE Enterprise™

Patient Unified Lookup System for Emergencies™

A medication and clinical history portal for disaster response

WHAT IS PULSE ENTERPRISE™

PULSE Enterprise is a web portal that allows appropriately verified users (e.g., clinical providers, emergency medical response personnel, volunteer healthcare providers, public health nurses, etc.) to find and view electronic patient data.

Following a declared disaster, individuals are often forced to seek care outside of their normal care networks. Providers may struggle to treat unfamiliar patients with little to no information about their medical history, medications, allergies, etc.

With a simple search on PULSE Enterprise, appropriately verified users can view documents that may include medications, allergies, diagnoses, and lab results. These documents are retrieved from the national health information networks (e.g., eHealth Exchange).

ADVANTAGES

Designed Specifically for Emergency Response
PULSE is the first medication and clinical history portal built specifically for disaster response. Using widely adopted industry standards and insights from experts across the emergency response field, PULSE Enterprise seamlessly delivers patient data when and where it is needed during declared disasters.

Provides Secure Access
Audacious Inquiry is certified by the leading standards organization for exchanging health information, HITRUST, as a demonstration of the company's commitment to taking the privacy and security of sensitive data very seriously. In addition, PULSE Enterprise is undergoing HITRUST certification, anticipated in 2021.

While PULSE Enterprise manages which users have been granted access, the system also provides single sign-on from existing provider authentication systems.

Connects to the National Networks
PULSE users have the ability to query patient records through the eHealth Exchange (now the largest health data sharing network in the United States) and Carequality. These interoperability frameworks offer connectivity to a vast and growing national network of provider facilities that spans across all 50 states.

WHAT OUR CUSTOMERS ARE SAYING...

"PULSE Enterprise is a game-changer for how we access disparate and siloed health information networks at the local, state, and national levels."

Nora Belcher, Executive Director
Texas e-Health Alliance

"PULSE Enterprise is a secure, statewide, and standardized means to access patient information through a smartphone or tablet, which will significantly speed up the delivery of care during emergencies."

George Gooch, CEO
Texas Health Service Alliance
